# Introduction to jQuery AJAX

#### **HTTP Methods**

- GET
- POST
- PUT / PATCH
- DELETE

# **Data Types**

- Text
- HTML
- Script
- JSON
- JSONP
- XML

### A is for Asynchronicity

- Very hard to work with
- Responses can only be handled using callbacks
  - For success
    - .done vs success
  - For failure
    - .fail vs error
  - For everytime
    - o .always vs complete

### \$.ajax - the wrong way

```
$.ajax({
    url: "",
    dataType: "",
    type: "GET",
    data: {},
    success: function (json) {},
    error: function (xhr, status, error) {},
    complete: function (xhr, status) {}
});
```

# \$.ajax - the right way

```
$.ajax({
   url: "",
    dataType: "",
    type: "GET",
    data: {}
}).done(function ( json ) {
}).fail(function ( xhr, status, error ) {
}).always(function ( xhr, status ) {
});
```

#### **AJAX Shorthands**

```
$.get();$.getJSON();$.getScript();$.post();load();
```
